GIAIC: HACKATHON

TASK: 4

BUILDING DYNAMIC FRONTEND COMPONENTS FOR YOUR TULOS:

1. Product Display: Use React components to display clothing products dynamically by pulling data from your backend.

2. Filters & Sorting: Implement filtering options for categories like size, price, and color that dynamically update the displayed products.

3. Product Details Page: Build a page for each item that loads product info (e.g., description, images) dynamically.

4. Cart System: Implement a dynamic cart that updates in real-time as users add or remove items.

5. API Integration: Use RESTful APIs to dynamically pull product and category data.
